

.50 Cal. Sniper Rifle HECATE II®

Description

Hecate II® is structured around a very rigid central metallic girder :

- a receiver made of high quality 7075 aircraft grade aluminum;
- a bolt with three front lugs and overpressure vent holes ;
- a match quality trigger ;
- a 7- round detachable magazine ;
- a full floating match grade barrel fitted with a muzzle brake including a very efficient thrust reverser ;
- a detachable stock for easy transport ;
- an adjustable folding bipod fitted with an axial adjustable brake ;
- a collapsible carrying handle ;
- sling attachments ;
- backup iron sights.

The standard rifle is delivered with :

- A folding bipod
- Two 7-shots magazines
- a MIL-STD 1913 Picatinny type scope rail

Missions

For the longest shots and the hardest of targets, nothing does the job quite like thev .50 Cal.

Hecate® II can effectively engage targets normally acquired by heavy machine guns but with precision and discretion, for only a fraction of the weight.

Hecate® II offers the marksman superior downrange energy and versatility of ammunition (ball, armor-piercing, incendiary, APEI,...)

It is the perfect precision instrument to provide the outstanding power, the accuracy and the consistency required by highly trained snipers.
